Categories Resource

Categories are maintained in the Sage Data Exchange application. The Categories Resource returns the Category and, optionally, the Products within the Category.

Categories can also return the column names that represent the properties of the products. For example, the Category "Mens Shoes" may contain properties like "Color" and "Size". The Category response would contain a array, "properties", with the two values "Color" and "Size".

Resource Method List				
Action	HTTP	URI	Admin?	Description
get	GET	/categories[?category=<category>]		Retrieve Category and, optionally, Product data for one or more Categories
list	GET	/categories		Retrieve Category and, optionally, Product data for one or more Categories
